

Damage analysis for ropeway sheave liners and bullwheel liners

When something goes wrong

Installations or installation components don't always function as they should. Parts can sometimes wear prematurely or fail entirely. In such cases, Haberkorn can be relied upon to provide assistance in identifying the causes without delay.

Highlights – Damage analysis for ropeways

Getting to the root of the problem

You provide a description of the application and the malfunction along with samples and operating parameters. In most cases, our many years of international experience with the installations and components of many manufacturers enables us to identify the causes at the latest in our testing laboratory. We then suggest solutions.

On-site inspections

Sometimes a damaged part cannot be easily removed or it might be difficult to troubleshoot remotely. In cases such as these, we simply get in the car, drive to the location and check out the damage on site.
