

Maintaining an overview H-Rent equipment loan system from Haberkorn

HABERKORN

Full transparency regarding all your equipment

When you have a lot of different equipment such as small appliances, tools or measuring devices that different employees need on a daily basis, it's difficult to maintain an overview. Especially when those tools have to be inspected and calibrated at regular intervals.

With the H-Rent equipment loan system, you have an overview at all times – with a system where you can store your equipment and issue it to employees when required. When the product is no longer needed, they place it back in the loan system. Products that are faulty or require calibration are blocked for further use when returned and you receive a message that the products need to be repaired or reset. The individual cell configuration offers space for a wide range of different products – entirely tailored to your specific requirements.

Tailored to your needs with maximum availability

The H-Rent equipment loan system can be precisely tailored to your requirements. It offers space for tools and equipment of many different kinds and sizes. In addition, transparent documentation and regular reporting means you always have the necessary overview. At any point in time, you know which product can be found in which dispenser or with which employee.

Your benefits at a glance

- Full overview of all products 24/7
- Automatic reporting of product location and status
- Simple expansion options
- Administration of products and customer inventory numbers
- No integration into customer's network required
- Individual statuses can be defined for returns (faulty, to be calibrated, etc.)

High capacity with small dimensions

The carousel dispenser provides room for up to 165 different products and is based on the principle of a rotating drum. This enables a large number of different products to be stored within a small space. The intuitive operation is by means of a touchscreen, which can also be used to operate any additional machines such as a flap dispenser.

Your benefits at a glance

- Simple operation using touchscreen
- Use of customer-specific fob chips on request
- Capacity can be adjusted in line with current operational requirements

Up to 165 different products —————

Rotating drum —————
for a large number of small products

Simple operation using touchscreen —————

Simple dispensing for products with large dimensions

Up to 40 different products

Generous compartment depth
for items with large dimensions

The flap dispenser enables automatic dispensing for up to 40 different products. Thanks to the generous depth of the compartments, the flap dispenser is ideal for products with large dimensions. It can be used as a stand-alone solution with its own control panel or in combination with the carousel dispenser.

Your benefits at a glance

- 4 different height options
- Capacity can be adjusted in line with current operational requirements
- In combination with carousel dispenser or with own control panel

It's this easy

1 Removal

Employees identify themselves with their fob chip every time they want to retrieve an item. The selected compartment is unlocked by the system and automatically recorded.

2 Return

Once the product is no longer required, it is returned to the dispenser. The status is entered in order to block the product if necessary and trigger an inspection or replacement.

3 Maintaining an overview

Thanks to the cloud-based management software, you know where products are located at all times. In addition, you can always view their status and maintain or replace them as required.

4 Product maintenance

Defective products are shown in the system and can be removed for maintenance. Inspected or new products can then be placed in the compartments.
